

# How Wysetek's Server Load Balancing Solution simplified business for a Top-notch Bank!

---

## Fading data center footprints and finance figures!

### Client Background

A Leading Private Bank having its presence in India as well as around the globe has unimaginable amount of data flowing every hour. Being one of the top three banks in India, it offers the entire spectrum of financial services to customer segments covering Large and Mid-Corporates, MSME, Agriculture and Retail Businesses. They were looking out for a load balancing solution to meet their business demands and manage customer details.

### Pain Points

The Bank chose Radware alteon 5208 XL Application delivery solution for its unique virtualization capabilities including complete fault, network and management isolation between its virtual application delivery controllers. Below were the challenges faced:

- ✦ Ongoing growth of user session traffic
- ✦ Increased load on services and server
- ✦ Application availability & server downtime
- ✦ Datacenter footprints and high costs

### Expert Analysis

The Wise brains at Wysetek were spot-on to discover that the bank needed a multiple virtual application delivery controller instances running on single platform. This helps reduce datacenter costs, management & eventually footprints too.

### Resolution by Wysetek

Our Wysetek Technical Specialist implemented and configured Alteon 5208XL in the Leading Private Bank. Wysetek team has load balanced services with server farm in active-backup configuration using Alteon high availability feature, to suite the requirements of the bank.

### Why Wysetek
