

Wysetek helps Pharma Company to reduce DC Cost Ops

Performance, Compliance and ease of IT ops was achieved with VMware Virtualization suite for Business Continuity.

The customer is an international pharmaceutical company based in Mumbai with multiple locations in India. For more than 60 years, the company has been partnering healthcare globally in over 120 countries and in markets as diverse as Africa, Asia, Australia, Europe and the US.

A fully-integrated Indian pharmaceutical company manufactures over 350 formulations and 80 APIs for various therapeutic segments.

Pain Points

The company's multiple locations across the country encompasses multiple datacenters at their lab locations. The biggest challenge they were facing was the monitoring and maintenance of the logs which were required for audit purpose.

The company was possessing ESXi standard license for all locations and there were no alerts configured for monitoring due to limitations of standard license. The manual monitoring and maintenance was a time consuming and tedious job. Also there was no specific log repository for audit purpose.

Project Analysis

The main objective was to bring down the highly involvement of people to monitor all locations and instead have a log repository for all virtual infrastructure. There was an urgent need to receive alerts update to the latest software technology that would ease the data center manageability and also increase the productivity.

After complete study and survey conducted by high profile technical team at Wysetek, the outcome result was tabled was to proceed with single plane visibility for all locations alerts and status of environment. To achieve software compliance, VMware's Virtualization with Business continuity was proposed.

The Benefits

The solution helped bring down Datacenter Operation cost in terms of resources involved managing and monitoring, should have log repository for each site as per requirement of audit as there are frequent audits performed on location as per Pharma laws laboratories.

VMware's Virtualization with Business continuity helped reduce the number of management cost over operations. With reduction in management cost over operations, high savings were achieved in terms of manageability and production impact aggregated with any impact of any human errors.

Performance, Compliance and ease of IT operations was achieved with VMware Virtualization Cloud suite for Business Continuity.

VMware features with upgraded version in cloud suite with private cloud suite delivered capabilities in operations, analysis and importantly met all the business requirements of client.

"The company's multiple locations across the country encompasses multiple datacenters at their lab locations. The biggest challenge they were facing was the monitoring and maintenance of the logs which were required for audit purpose."

KEY BENEFITS OF VMWARE VIRTUALISATION WITH BUSINESS CONITUNITY

- Bring down Datacenter Operation cost in terms of resources involved managing and monitoring
- There was log repository for each site as there are frequent audits performed on location as per Pharma laws laboratories.
- High savings were achieved in terms of manageability and production impact aggregated with any impact of any human errors.
- Performance, Compliance and ease of IT operations was achieved with VMware Virtualization Cloud suite for Business Continuity.
